

# Sealed & Maintenance Free Battery GT Series

## Characteristics

### NO SUPPLEMENTAL WATER

No need for periodic maintenance or supplemental water filling as the gases produced in the battery is absorbed by negative plates.

### NO LEAKING (Free Positioning)

There is no fear of leaking as the electrolyte is flow-regulated by a special separator. The battery can be positioned in any direction specified by the manufacturer.

### LONG LIFE AND HIGH CRANKING PERFORMANCE

A long life has been realized by using special separators and corrosion-resisting alloy grids. Also a reduction in internal battery resistance achieves high starting performance, a reduction in self discharge is achieved through the use of a lead-calcium alloy grid.

### HIGH RELIABILITY

Safety valves and explosive-proof filters in the cells of the battery prevent internal pressure rise damage caused by overcharging or battery explosion caused by external flames.
